-

### **Course Content & Scope:**

Online retail course covers the business models and mode of operation of online retail businesses in various segments. The basic building blocks of an online retail company are analyzed from the operational and business perspectives. The course examines significant examples of successful and less successful online retail enterprises from the last 15 years and gives an outlook onto the current and future trends of the industry. Along with examination of global online retail, special attention is given to the geographical and cultural perspectives of online retail - customers, managerial practice and operations. These are done through insight into successful and less successful cross cultural implementations of business models. The theoretical materials combined with practical application of knowledge during execution of the course project.

The course is based on a practical and applicable knowledge accumulated from various global and local online retailers, marketplaces and shopping comparison engines. It provides the overview of the business area of online retail with an insight into the day to day challenges and seasonal fluctuations. It provides the practical knowledge in most of the aspects of online retail including marketing, operations, content management, customer support, payments in online and offline world.

The project and the following presentation will be graded based on the following criteria:

- Timely execution of all project stages
- Sound approach to content creation and insertion
- Clarity of verbal and visual presentation of the project
- Final outcome of the activity – sale closure, selling price (bonus)

### **Teaching Methods:**

The course consists of 6 sessions presented on various aspects of ecommerce operations.

Guest lecturers will be invited to some of the lectures, these will include high ranking managers of global online retail related multinationals. Business cases of successful and failing enterprise moves will be presented and examined in the class.

The course includes readings, competitive, hands on, online retail project and a final presentation of the project process and outcome (group).

---

For the project (groups of 3-4) the students will embark on a selling process on a major retail platform and conduct sales process in all stages from account setup, product insertion onto platform, content creation, pricing research, product pricing, communication with potential buyers, sale and payment clearance, shipping and potential follow up.

### **Teaching Materials:**

Teaching materials consist of presentations shown in class, case studies presented in class and additional case studies distributed for reading.
