

MBA – Focusing on Entrepreneurship, Innovation & Technology Management

Market Opportunities for Innovative Technologies

Course Number: 99793

Mini-Semester 7 of the Academic Year 2025/26

Thursdays, 14:00-17:45

Bloomfield 527

Course Instructor: Dr. Sharon Tal Itzkovitch_

E mail: iesharon@technion.ac.il

Meeting time for students: by appointment

Teaching Assistant:

E mail: shaihi@icloud.com

Meeting times for students: by appointment

Prerequisites: None

Credits: 2 points

Estimated study hours per week: 3.5 in class + 2-3 hours at home

Course Goals and Description

The choice of market opportunities for a new technology is one of the most challenging tasks for innovators and entrepreneurs, yet one of the most profound decisions in the commercialization effort.

MBA – Focusing on Entrepreneurship, Innovation & Technology Management

In this hands-on course, we will learn how to discover the most valuable market opportunities and find out where to focus.

The goal of this course is threefold:

- (1) to understand the process of market opportunity identification and evaluation in the context of new technologies;
- (2) to acquire a practical business tool (the Market Opportunity Navigator) for identifying, evaluating and prioritizing market opportunities for a core technology;
- (3) to apply this know-how on a real invention, and gain hands-on experience in this critical choice.

Learning Outcomes

At the end of the course the student will be able to:

1. Identify different applications and customers for innovative technologies
2. Evaluate the value creation potential of a market opportunity
3. Evaluate the challenges in capturing value for each market opportunity
4. Set a promising strategic focus
5. Balance focus and flexibility in new ventures
6. Understand the complementing nature of the 'Market Opportunity Navigator' to other well-known business tools

Course Content/Topics

The course addresses one of the most profound decisions in new venture creation: the choice of which market(s) to focus on. Students will learn how to identify, evaluate and prioritize

MBA – Focusing on Entrepreneurship, Innovation & Technology Management

market opportunities, stemming from the unique abilities or technological competencies of the venture, to get the most out of their innovation.

The course is based on a novel business tool - the “Market Opportunity Navigator” - an easy to apply framework, covering the three essential steps for setting a winning strategy:

Step 1- Generating a Market Opportunity Set:

How to search systematically and broadly for market opportunities in order to create a varied set of options.

Step 2- Creating an Attractiveness Map:

How to evaluate different market opportunities and compare their attractiveness in a systematic, unbiased manner.

Step 3- Designing an Agile Focus Strategy:

How to build a strategy that focuses on the most attractive market and at the same time avoids lock-in and nurtures agility.

This framework adds a highly critical component to other popular business tools such as the “Business Model Canvas” or the “Lean Start-up”.

During the entire course, students will work in teams on developing a market opportunity strategy for a technological invention, following the three steps of the Navigator.

Assignments and Grading Procedures

The course grade will be based on the following:

- 1) Class attendance and active participation - 10%
- 2) Mid-term presentation & report, on meeting 5 (5/2/26). Detailed instructions will be given separately- 35% (all team members must attend the presentation)
- 3) Final presentation & report, on meeting 7 (19/2/26). Detailed instructions will be given separately- 30% (all team members must attend the presentation)

MBA – Focusing on Entrepreneurship, Innovation & Technology Management

- 4) Individual reflection report, to be submitted by 8/3/26. Detailed instructions will be given separately- 25%

19.2.26	<ul style="list-style-type: none"> • Final presentations: the Primary Market Opportunity and Agile Focus strategy • Main takeaways and course wrap-up 	

Course Requirements & Course Policies

This course will combine several teaching methods:

- Class lectures will present applicable business tools with detailed explanations on how to apply them, along with numerous examples and cases.
- You will work in groups on a new venture proposal, i.e. generate ideas for market applications, identify problems, analyze and evaluate alternatives, to develop a promising strategy for a specific technology. Thereby you will be able to experience the early stages of new venture creation at first hand.
